

## Your Business Dilemma: Migrate to Exchange 2007 with Minimal Downtime and Cost

When it's time to migrate your mailboxes, external contacts, distribution lists, and other objects from Exchange 2003 to Exchange 2007, you don't want to take any chances. You want a proven solution that minimizes downtime and reduces costs during the migration, and that improves your ability to manage Exchange after the migration.

## Our Solution: Simplified and Automated Migrations with Ensim Unify

Unify's Exchange Migration Manager enables you to test and automate migration tasks through a simple web interface and thereby dramatically reduce the complexity of the project—which minimizes disruption to your end users and reduces costs.

- ◆ **Save time and reduce project costs by 40 to 70%** — A 2,000-mailbox enterprise in which the average mailbox is 100 MB would typically spend 30 continuous hours to migrate their users to Exchange 2007. The same process takes only 34 minutes with Unify's Exchange Migration Manager.
- ◆ **Reduce complexity** — Migrating mailboxes and objects has never been easier: Simply select the mailboxes, organizational units, or entire domain that you want to migrate and schedule the process to the most convenient time.
- ◆ **Increase control** — Unify's Exchange Migration Manager gives you complete control over the migration process from a single web-based interface. You can now migrate and manage your environment safely and securely.
