

Your Business Dilemma: Balance the Security of your Corporate Data Against the Productivity Benefits of Mobile Access

Your users demand mobile access to corporate data. And the productivity benefits of mobile access compel you to comply. But every packet of data that travels outside your firewall represents a potential breach of security and privacy. And to further complicate matters, different users prefer different devices—some need BlackBerry, some want Good, others want Windows Mobile.

How can you possibly manage this growing array of devices and the security risks each one represents?

Our Solution: Unified Mobility Management with Ensim Unify

Unify's Mobility Manager provides a single web-based interface through which you can quickly and easily manage your entire mobile access infrastructure—including your users' various devices of choice.

- ◆ Increase the security of your sensitive corporate data
 - ◇ Instantly lock/wipe lost or stolen devices, remotely, any time of day or night
 - ◇ Generate and set user activation passwords
 - ◇ Enforce strong password policies
- ◆ Reduce your IT management burden
 - ◇ Quickly activate and update devices remotely
 - ◇ Easily create custom device provisioning and de-provisioning policies
 - ◇ Set automatic alerts and notifications according to pre-defined thresholds
 - ◇ Securely delegate administrative tasks down to your help desk and/or your end users (device activation, password reset, 24/7 remote lock/wipe)
- ◆ Easily manage various systems and devices in a single web-based console
 - ◇ BlackBerry, Windows Mobile, and Good are all supported
