# DISCOVERY ATTENDER<sup>®</sup>

Electronic Search and Discovery

Discovery Attender for Lotus Notes is a search and discovery tool designed to automate investigative tasks in Lotus Notes databases, instant message logs and common file storage areas. Discovery Attender can now operate with or without a Domino Server and enables IT and Legal teams to immediately access content and efficiently search, locate and review data for electronic discovery requests.

## Discovery Attender can easily search content in:

- Notes .NSF mail files and applications
- Networked User Hard Drives
- Instant Message (IM) Logs
- Files Created Outside of Notes (.doc, .xls, .pdf, etc.)

Pricing starts at  
**\$1975/installation** with  
Volume Discounts Available

## Features

### Architecture

- Runs on Notes 6.x, 6.5x, 7.x and 8.x for all OS platforms
- No architectural changes required
- Uses LotusScript-based agents
- Server or Client-based processing
- No API code
- Desktop version requires the Lotus Notes client and a Lotus ID file (provided at installation)

### Installation

- Easy and non-intrusive
- Installed from a single Notes client to all servers
- Server version installed on Domino mail servers
- Perform installation from your desk

### General Features

- Produce data in response to subpoenas, requests from inside counsel or court orders
- Manage legal, HR and corporate discovery requests
- Search data for suspected evidence, confidentiality breaches or misrepresentations
- Transparent searches with no disruption of service
- Domino interface for request creation, progress monitoring and results
- Fast and secure system to execute discovery requests
- Customize search parameters for individual users
- Assist in compliance with the new amendments to the Federal Rules of Civil Procedures

### Content Discovery

- Examine Notes .NSF mail files and applications
- Search networked user hard drives
- Search instant message (IM) logs
- Search files created outside of Notes (.doc, .xls, .pdf, etc.)
- Target searches to specific folders/views within databases
- Dynamic keyword scanning with Boolean logic (and, or, not)
- Search email and attachments
- Customizable search criteria includes keywords and/or date ranges
- Ability to search documents that have been created/modified by a specific user or users
- Identify content based on specific patterns (###-##-####)
- Isolate search results into a separate Notes database for review
- Automated creation/removal of full-text indexes on target databases

### Results Reporting

- User-friendly interface for management of result items
- Deduplication of results
- Annotate results findings for further qualification
- Web-enabled results allow internet/intranet/extranet access/annotation
- Export results to XML
- Relevancy scoring provided for each document
- Archive, copy, delete and rename Discovery Attender results on user hard drives when used in conjunction with File Attender for Notes
- Reference information stored for each document (server, database, universal id)
- Product integrated help guide based on proficiency levels
